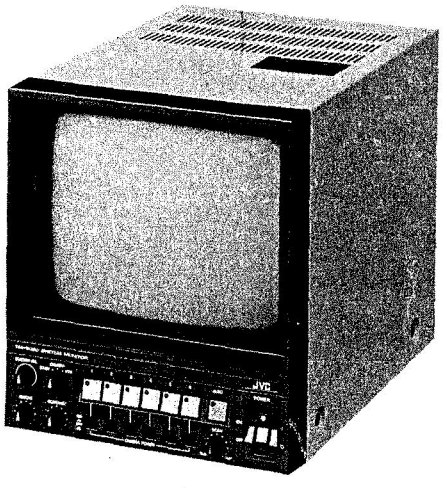
JVC

SERVICE MANUAL

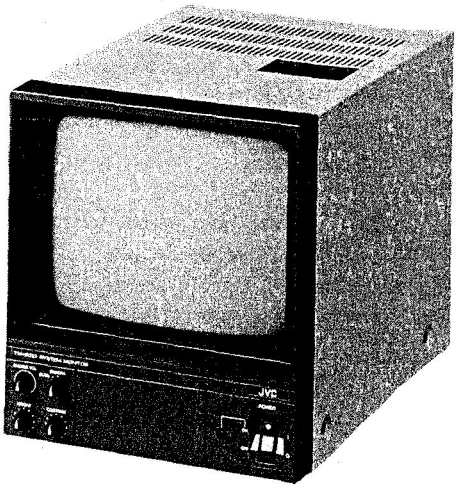
VIDEO MONITOR

TM-9060/TM-9010

(for TK-10/TK-N10)



— TM-9060 —



— TM-9010 —

SPECIFICATIONS

Horizontal resolution	: More than 900 lines (at center)
Scanning frequency	
Horizontal	: 15.75 kHz (U-type)/15.625 kHz (E-type)
Vertical	: 60 Hz (U-type)/50 Hz (E-type)
Inputs	
Camera	: x 6 (TM-9060)/x 1 (TM-9010), TK-10/N10 only
VTR playback (TM-9060 only)	: 1 Vp-p (composite video signal), 75 ohms
Alarm	: x 6 (TM-9060)/x 1 (TM-9010), contact low level
Timer (TM-9060 only)	: Contact low level
Outputs	
Camera-1 (TM-9060 only)	: 1 Vp-p (composite video signal), 75 ohms
Alarm	: Make contact (metal)
Timer (TM-9060 only)	: Open-collector (low level)
Select (TM-9060 only)	: x 6, open-collector (low level)
Video	: 1 Vp-p (composite video signal), 75 ohms
S/N	: 54 dB (w/o sync noise)
Power consumption	: 120 V 60 Hz (U-type) 220/240 V 50/60 Hz (E-type)
Weight	: 9.1 kg (20 lbs) . . . . . TM-9060 7 kg (15.5 lbs) TM-9010

No. 6409R
Sep. 1989

TABLE OF CONTENTS

Important Safety Precautions

Prior to shipment from the factory, JVC products are strictly inspected to conform with the recognized product safety and electrical codes of the countries in which they are to be sold. However, in order to maintain such compliance, it is equally important to implement the following precautions when a set is being serviced.

● Precautions during Servicing

1. Locations requiring special caution are denoted by labels and inscriptions on the cabinet, chassis and certain parts of the product. When performing service, be sure to read and comply with these and other cautionary notices appearing in the operation and service manuals.

2. Parts identified by the ⚠ symbol and shaded (▒▒) parts are critical for safety.
   Replace only with specified part numbers.
   Note: Parts in this category also include those specified to comply with X-ray emission standards for products using cathode ray tubes and those specified for compliance with various regulations regarding spurious radiation emission.

3. Fuse replacement caution notice.
   Caution for continued protection against fire hazard.
   Replace only with same type and rated fuse(s) as specified.

4. Use specified internal wiring. Note especially:
   1) Wires covered with PVC tubing
   2) Double insulated wires
   3) High voltage leads

5. Use specified insulating materials for hazardous live parts. Note especially:
   1) Insulation Tape
   2) PVC tubing
   3) Spacers
   4) Insulation sheets for transistors
   5) Barrier

6. When replacing AC primary side components (transformers, power cords, noise blocking capacitors, etc.) wrap ends of wires securely about the terminals before soldering.

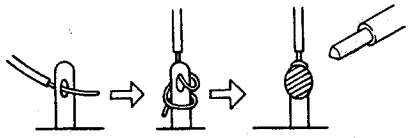


Fig. 1

7. Observe that wires do not contact heat producing parts (heatsinks, oxide metal film resistors, fusible resistors, etc.)

8. Check that replaced wires do not contact sharp edged or pointed parts.

9. When a power cord has been replaced, check that 10—15 kg of force in any direction will not loosen it.

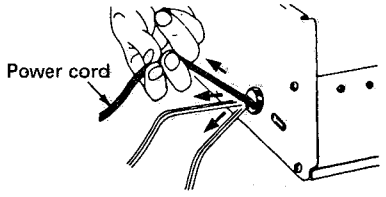

Fig. 2

10. Also check areas surrounding repaired locations.

11. Products using cathode ray tubes (CRTs)
    In regard to such products, the cathode ray tubes themselves, the high voltage circuits, and related circuits are specified for compliance with recognized codes pertaining to X-ray emission. Consequently, when servicing these products, replace the cathode ray tubes and other parts with only the specified parts. Under no circumstances attempt to modify these circuits. Unauthorized modification can increase the high voltage value and cause X-ray emission from the cathode ray tube.

12. Crimp type wire connector
    In such cases as when replacing the power transformer in sets where the connections between the power cord and power transformer primary lead wires are performed using crimp type connectors, if replacing the connectors is unavoidable, in order to prevent safety hazards, perform carefully and precisely according to the following steps.

    1) **Connector part number** : E03830-001
    2) **Required tool** : Connector crimping tool of the proper type which will not damage insulated parts.
    3) **Replacement procedure**
       (1) Remove the old connector by cutting the wires at a point close to the connector.
       Important : Do not reuse a connector (discard it).

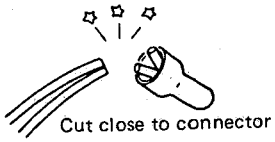

Fig. 3

(2) Strip about 15 mm of the insulation from the ends of the wires. If the wires are stranded, twist the strands to avoid frayed conductors.

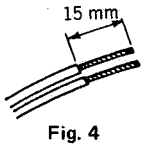

Fig. 4

(3) Align the lengths of the wires to be connected. Insert the wires fully into the connector.

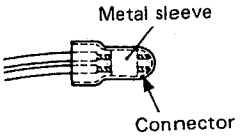

Fig. 5

(4) As shown in Fig. 6, use the crimping tool to crimp the metal sleeve at the center position. Be sure to crimp fully to the complete closure of the tool.

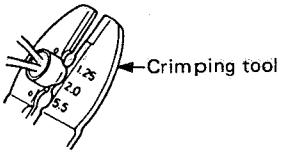

Fig. 6

(5) Check the four points noted in Fig. 7.

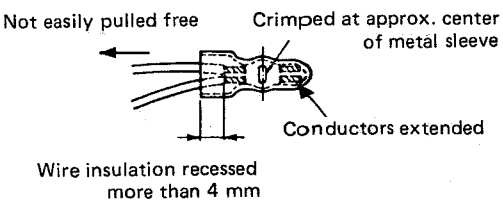

Fig. 7

● Safety Check after Servicing

Examine the area surrounding the repaired location for damage or deterioration. Observe that screws, parts and wires have been returned to original positions, Afterwards, perform the following tests and confirm the specified values in order to verify compliance with safety standards.

1. Insulation resistance test

Confirm the specified insulation resistance or greater between power cord plug prongs and externally exposed parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table 1 below.

2. Dielectric strength test

Confirm specified dielectric strength or greater between power cord plug prongs and exposed accessible parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table 1 below.

3. Clearance distance

When replacing primary circuit components, confirm specified clearance distance (d), (d') between soldered terminals, and between terminals and surrounding metallic parts. See table 1 below.

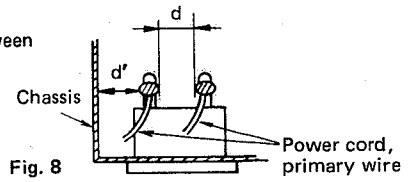

Fig. 8

4. Leakage current test

Confirm specified or lower leakage current between earth ground/power cord plug prongs and externally exposed accessible parts (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.).

Measuring Method: (Power ON)

Insert load Z between earth ground/power cord plug prongs and externally exposed accessible parts. Use an AC voltmeter to measure across both terminals of load Z. See figure 9 and following table 2.

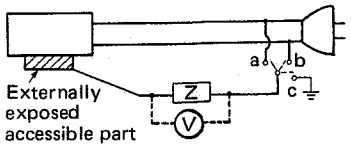

Fig. 9

5. Grounding (Class I model only)

Confirm specified or lower grounding impedance between earth pin in AC inlet and externally exposed accessible parts (Video in, Video out, Audio in, Audio out or Fixing screw etc.).

Measuring Method:

Connect milli ohm meter between earth pin in AC inlet and exposed accessible parts. See figure 10 and grounding specifications.

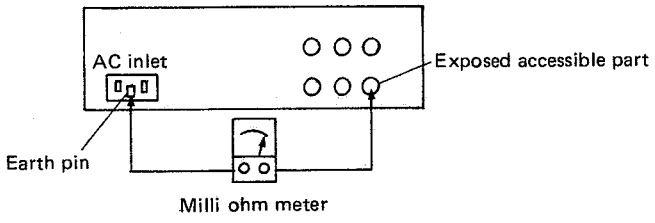

Fig. 10

Grounding Specifications

Region	Grounding Impedance (Z)
USA & Canada	Z ≦ 0.1 ohm
Europe & Australia	Z ≦ 0.5 ohm

AC Line Voltage	Region	Insulation Resistance (R)	Dielectric Strength	Clearance Distance (d), (d')
100 V	Japan	R≧1 MΩ/500 V DC	AC 1 kV 1 minute	d, d' ≧ 3 mm
100 to 240 V			AC 1.5 kV 1 minute	d, d' ≧ 4 mm
110 to 130 V	USA & Canada	–	AC 900 V 1 minute	d, d' ≧ 3.2 mm
110 to 130 V 200 to 240 V	Europe & Australia	R≧10 MΩ /500 V DC	AC 3 kV 1 minute (Class II) AC 1.5 kV 1 minute (Class I)	d ≧ 4 mm d' ≧ 8 mm (Power cord) d' ≧ 6 mm (Primary wire)

Table 1 Specifications for each region

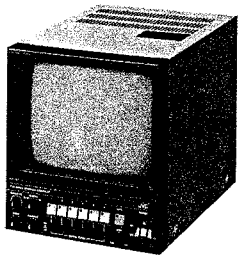
AC Line Voltage	Region	Load Z	Leakage Current (i)	a, b, c
100 V	Japan	1 kΩ	i ≦ 1 mA rms	Exposed accessible parts
110 to 130 V	USA & Canada	0.15 μF, 1.5 kΩ	i ≦ 0.5 mA rms	Exposed accessible parts
110 to 130 V 220 to 240 V	Europe & Australia	2 kΩ	i ≦ 0.7 mA peak i ≦ 2 mA dc	Antenna earth terminals
		50 kΩ	i ≦ 0.7 mA peak i ≦ 2 mA dc	Other terminals

Table 2 Leakage current specifications for each region

Note: These tables are unofficial and for reference only. Be sure to confirm the precise values for your particular country and locality.

JVC Instructions

SYSTEM MONITOR TM-9060



For Customer Use:
Enter below the Serial No. which is located on the top of the body. Retain this information for future reference.

Model No. **TM-9060**

Serial No.

CAUTION
RISK OF ELECTRIC SHOCK
DO NOT OPEN

CAUTION: TO REDUCE THE RISK OF ELECTRIC SHOCK,
DO NOT REMOVE COVER.
NO USER-SERVICEABLE PARTS INSIDE.
REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

Due to design modifications, data given in this instruction book are subject to possible change without prior notice.

WARNING:
TO PREVENT FIRE OR SHOCK HAZARD, DO NOT EXPOSE THIS UNIT TO RAIN OR MOISTURE.

AVERTISSEMENT:
POUR EVITER LES RISQUES D'INCENDIE OU D'ELECTROCUTION, NE PAS EXPOSER L'APPAREIL A L'HUMIDITE OU A LA PLUIE.

Thank you for purchasing the JVC TM-9060 System Monitor. To gain maximum benefit from the monitor and for correct operation, please read this booklet carafully. After reading it, retain for future reference.

CONTENTS

FEATURES

- Designed for connection of up to six video cameras (TK-10 or TK-N10) which can be controlled from the six built-in CCUs.
- Built-in video sensor detects changes in the "Video sensor" area set in the picture, to ring buzzer and display picture on the screen.
- Electronic buzzer with variable volume.
- Video input/output terminals for monitoring/recording using a video recorder.
- Camera-1 video signal output terminal for permanent monitoring/recording of an important field of view.
- Auto-scan circuit for monitoring by switching between six video cameras, eliminating the need of additional sequential switcher.
- Camera power switches for remote power ON/OFF control.
- Others: External alarm input/output terminals, selected output terminal, timer input/output terminals, CCU power supply protection circuit (which protects power supply even when loads other than cameras are connected), stand-by function.

PRECAUTIONS

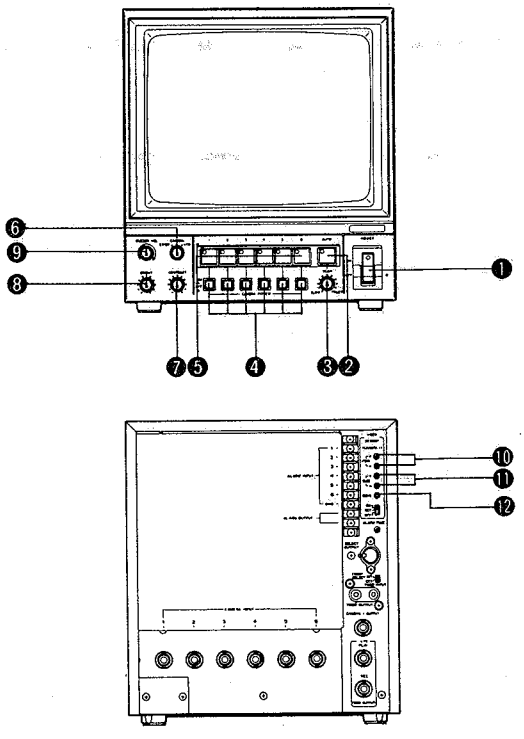
Safety Precautions

- Do not attempt to modify the monitor or operate it with its cover removed.
- Do not allow inflammable objects, water or metallic objects to get inside the monitor, as this could cause damage or a malfunction.
- When there is any abnormality (abnormal noise, smell, smoke, etc.), switch power off and contact your nearest JVC-authorized service agent.

Handling Precautions

- If used near a source of powerful electromagnetic waves or a magnetic field, for example near a radio or TV transmitter, motor, etc., noise could enter the picture.
- The TM-9060 was designed specially for the TK-10/TK-N10 video cameras (optional). It cannot be used with input video signals from other cameras.
- When a wireless microphone or wireless microphone tuner is used near the system monitor, the tuner could pick up noise. In such a case, select another channel.

CONTROLS, CONNECTORS AND INDICATORS



❶ **Power switch (POWER)**

❷ **Auto button (AUTO)** (See pp. 11 – 12)
Inputs from the video camera connected can be switched automatically. When this button is pressed, the lamp lights and pictures from the cameras are switched in sequence.

❸ **Auto scanning time control (SCAN)**
When AUTO button ❷ is depressed, the switching of the monitored pictures can be controlled by this knob.

Note: The duration setting is variable from approx. 0.5 second to 2 minutes.

❹ **Camera power switches (CAMERA POWER)**
Power of each camera connected can be switched ON/OFF separately.

❺ **Manual switching buttons (1, 2, 3, 4, 5, 6)** (pp. 11 – 12)
One of the inputs from the cameras connected can be selected manually. When one of these buttons is pressed, the lamp lights and the picture from the selected camera is displayed.

Note: These buttons are interlocked with Auto button ❷.

❻ **Monitor mode select switch (ST/BY, CAMERA, VTR)** (pp. 11–12)
- ST/BY: Select this position when a picture is required only when the video sensor is activated or an external alarm signal is input.
- CAMERA: Select this position when the image picked up by the camera is required all the time.
- VTR: Select this position when monitoring the picture from a video recorder.

❼ **Contrast control (CONTRAST)**

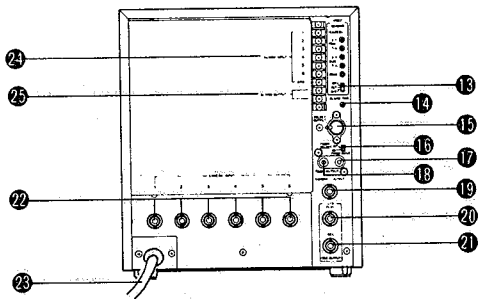
❽ **Brightness control (BRIGHT)**

❾ **Buzzer volume control (BUZZER VOL)** (pp. 8–10)
Adjusts the volume of the buzzer which rings when the video sensor is activated or an external alarm signal is input.

❿ **Sensor position controls (POSI)** (pp. 8–9)
POSI-V: Sets the vertical position of the video sensor.
POSI-H: Sets the horizontal position of the video sensor.

⓫ **Sensor size controls (SIZE)** (pp. 8–9)
SIZE-V: Sets the vertical range of the video sensor.
SIZE-H: Sets the horizontal range of the video sensor.

⓬ **Sensor sensitivity control (SENS)** (p. 9)



⓭ **Video sensor switch** (pp. 8–9)
ON: Set to this position to activate the video sensor.
SET: Set to this position to display the video sensor area.
OFF: Set to this position to deactivate the video sensor.

⓮ **Alarm time control (ALARM TIME)** (pp. 9–10)
Set the time for which the alarm mode should be held (after the video sensor has been activated or an alarm signal is input) from 8 seconds to 20 minute.

⓯ **Selected signal output connector (SELECT OUT)** (pp. 6–7)
The pin (one of pins 1 to 6) with the same number as that of the video camera input which is being displayed outputs an open collector (L level) signal.
Pin 7 is the GND terminal. Pin 8 is used to input a character generator signal for superimposition.

⓰ **Timer select switch (TIMER SELECT)** (pp. 6–7)
INT: Set when using auto scanning time control ❸.
EXT: Set for external control of auto scanning time when AUTO button ❷ is depressed.

⓱ **Timer input connector (TIMER INPUT)** (pp. 6–7)
The auto scanning time can be controlled by an external timer.

⓲ **Timer output connector (TIMER OUTPUT)** (pp. 6–7)
Switching signal controlled by auto scanning time control ❸ is output.

⓳ **Camera-1 video signal output connector (CAMERA-1 OUTPUT)**
The video signal input to connector "1" of CAMERA INPUT ㉒ is output at all times.

⓴ **VTR video signal input connector (VTR-PLAY)**
The playback video signal from a recorder can be input for monitoring.

㉑ **VTR recording output connector (VTR-REC)**
The video signal selected automatically or manually is output.

㉒ **Video signal input connectors (CAMERA INPUT)**
Connect theTK-10 or TK-N10 exclusive video cameras (optional) here; other cameras cannot be connected.

㉓ **Power cable**
Connect to an AC outlet.

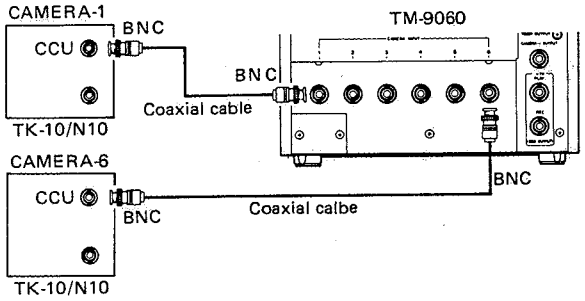
㉔ **Alarm input connectors (ALARM INPUT)** (p. 7)
The monitor enters the alarm mode when alarm signal is input.

㉕ **Alarm output connectors (ALARM OUTPUT)** (p. 7)
In the alarm mode, the alarm signal is output.

CONNECTIONS

- Be sure to connect the cameras with the monitor switched off, otherwise the protection circuit will operate and the cameras will not operate.
- Only TK-10 and TK-N10 video cameras can be used.
- It is not possible to insert anything (cable compensator, video distributor, etc.) between the monitor and video cameras because the power, video signal and genlock signal are multiplexed.

Connection to Exclusive TK-10 or TK-N10 Video Cameras

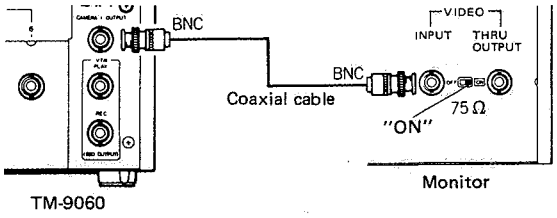


The maximum length of the coaxial cable depends on its thickness.

Coaxial cable size	Length
3C-2V(RG-59/u eqv.)	200 m
5C-2V	300 m
7C-2V(RG-11/u eqv.)	500 m

Note: Extension over 500 m is not possible even if a cable thicker than 7C-2V is used.

Connection to Additional Video Monitor



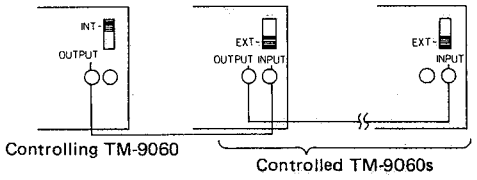
The CAMERA-1 video output can be connected to the video input of an additional video monitor via a coaxial cable.

Notes:
- Even when the monitor mode select switch of the TM-9060 is set to "ST/BY" or "VTR", the CAMERA-1 picture is always displayed on the additional video monitor.
- Only the CAMERA-1 picture is output.

Connection of Timer Input/Output Connectors

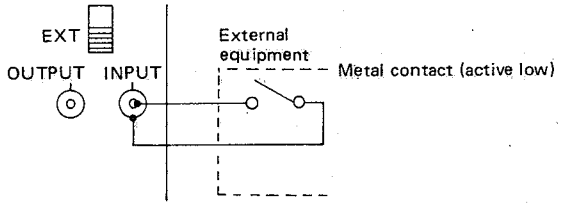
- Use these connectors to switch pictures simultaneously on two or more TM-9060s.

(1) Select one TM-9060 to use its timer for the control of other TM-9060s. Set its TIMER SELECT switch to "INT" and those of other TM-9060s to "EXT".



(2) Connect as shown above using RCA-type pin plug cables.

- To operate timer from external equipment
  To switch pictures with a timing input from external equipment, connect as shown below.



Pictures are swithced in sequence every time the contact is closed.

Connection of Alarm Input/Output Connectors

- **ALARM INPUT connector**

The alarm input terminal operates by the make-contact with the grounding terminal when a door switch, telephone, chime, etc. is used as the alarm signal. Other conditions should conform to the following.

(1) The contact resistance (including the line resistance of connection cable) should be less than 500 ohms.

(2) The voltage supplied for the contact should be 12 V DC and max. current 1 mA.

Notes:
- Pin Nos. of the ALARM INPUT connector correspond to the pin Nos. of the CAMERA INPUT connectors.
- As the alarm input uses make contact, it should be separated before an alarm signal is input.
- When the video sensor camera is installed where people pass frequently during the day, unnecessary alarms can be prevented by installing another switch to keep the alarm input open during the daytime.

- **ALARM OUTPUT terminal**

The alarm signal is output in the following two cases.

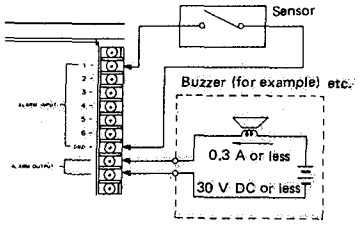
(1) When the alarm signal is input to the ALARM INPUT terminal.

(2) When the video sensor switch on the rear panel of the monitor is set to "ON" and there is movement within the video sensor area.

Note:
- The alarm signal is output in the above two cases regardless of the position of the monitor mode select switch.

The contact capacity of the alarm output is less than 30 V DC, 0.3 A.

An example of connection is shown on next page.



VIDEO SENSOR FUNCTION

The "video sensor" area can be set, by the user, within the picture shot by the camera. When any change or movement is detected in this area, the following three operations are activated automatically.

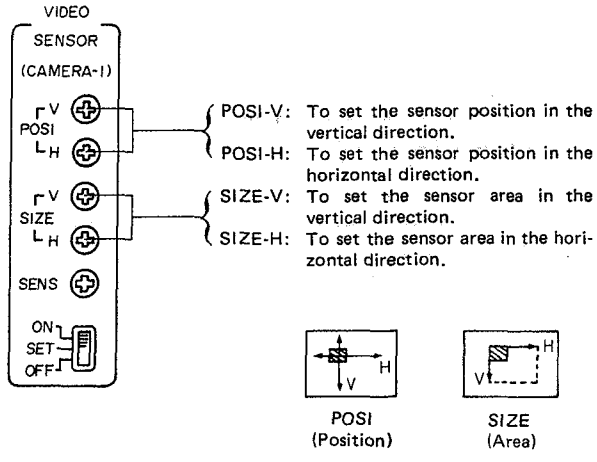
Operations in Alarm Mode

1. The picture from the camera connected to the CAMERA INPUT-1 connector appears on the screen.
2. The buzzer in the monitor rings.
3. An alarm signal is output from the ALARM OUTPUT terminal.

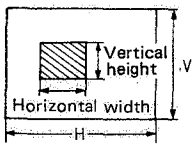
Notes:
- **The video sensor function operates only with the camera connected to the CAMERA INPUT-1 connector.**
- **The video sensor function is activated approx. 30 seconds after the power is switched on.**
- **The above operation is performed regardless of the position of the monitor mode select switch.**

Video Sensor Area Setting

1. Connect the TK-10 or TK-N10 video camera to the CAMERA INPUT-1 connector on the rear panel.
2. Set the POWER switch of the monitor to "ON".
3. Set the monitor mode select switch on the front of the monitor to "CAMERA".
4. Set the video sensor switch on the rear panel of the monitor to "SET".
5. A white square is displayed on the screen; this is the sensor area.
   Set the position and size as shown below.



- Setting the area (SIZE)
  The area can be set with the SIZE controls within:
  - 1/30 to 3/10 of the screen height.
  - 1/30 to 3/10 of the screen width.



Perform following adjustment 6 while watching a moving object in the sensor operation area.

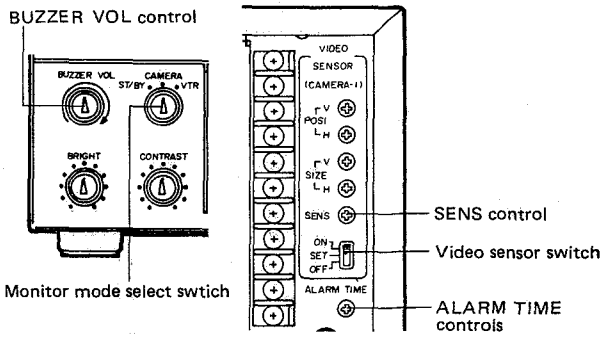
6. Set to the required sensor sensitivity with the SENS control.

Perform adjustments 7 and 8 while repeating the short-circuit and open condition between one of ALARM INPUT connectors 1 to 6 and the GND terminal.

7. Set the ALARM TIME control as required, between 8 seconds and 20 minutes (approx.). This is the duration for which the alarm mode is held.
8. Adjust the volume of the buzzer in the monitor with the BUZZER VOL control.

9. Set the video sensor switch to "ON". Now the video sensor area setting is completed.

- To release the alarm mode, press the AUTO button, press one of the manual switching buttons, or set the POWER switch to "OFF" then "ON" again.
- With the monitor mode select switch set to "ST/BY", the picture appears on the screen when the video sensor functions.



ALARM FUNCTION

When the external alarm signal is input via one of the ALARM INPUT terminals, the picture from the corresponding camera is displayed on the monitor for a time set by the ALARM TIME control, after which auto-scanning starts. This alarm mode is released when one of the manual switching buttons or the AUTO button is pressed.
When an external alarm signal is input to one of the ALARM INPUT terminals, the three operations of the alarm mode are activated as described on page 8.
For connection, refer to "Connection of Alarm Input/Output Connectors" on page 7.

Alarm Time and Buzzer Volume Setting

1. Input an external alarm signal.
2. The alarm time can be set to between 8 seconds and 20 minutes with the ALARM TIME control.
3. Adjust the BUZZER VOL control.
4. To release the alarm, press the AUTO button or one of the manual switching buttons, or set the POWER switch to "OFF" then "ON" again.

Notes:
- The alarm and video sensor functions can be used at the same time. To disable the video sensor function, set the video sensor switch on the rear of the monitor to "OFF".
- The alarm function starts operation approx. 30 seconds after power is switched on.

When a camera enters the alarm mode while another camera is already in the alarm mode after either the alarm or video sensor function has been activated, the subsequent operation has priority and the new picture is displayed.

DISPLAY IN ALARM MODE

A white square sign on the monitor screen and the lighting of a manual switching button lamp display the condition as shown below.

White square sign on the monitor screen

Video sensor Switch	Video sensor operation	External alarm operation
ON	Flashing	–
SET	Lighting	
OFF	–	

Lamp in a manual switching button

Video sensor Switch	Video sensor operation	External alarm operation
ON	Lighting	Flashing
SET	Lighting	Flashing
OFF	Lighting	Flashing

OPERATIONS

- Connect the video cameras, additional monitors, etc. as described on pages 6 and 7. Also connect the alarm input and output as required.
- When using the video sensor or alarm function, check its operation.

Note:
- When an alarm signal is input or when the video sensor is activated, these functions have priority on any other operations.

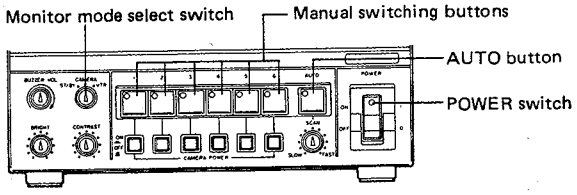
To Monitor Video Signal from TK-10 or TK-N10

1. Set the POWER switch of the monitor to "ON".
2. Set the CAMERA POWER switches of the cameras used to "ON".
3. Set the monitor mode select switch to "CAMERA".
4. To switch the cameras automatically, press the AUTO button. To switch the cameras manually, press the manual switching buttons.

Note:
- For operation of the video cameras, see the instructions provided with them.

To Monitor Only Alarm Condition

1. Set the POWER switch of the monitor to "ON".
2. Set the CAMERA POWER switches of the cameras used to "ON".
3. Set the monitor mode select switch to "CAMERA" and confirm that the picture is satisfactory.



4. Set the monitor mode select switch to "ST/BY". The picture will go off and only be displayed when an alarm is given.
5. To release the alarm mode, press the AUTO button or one of the manual switching buttons, or set the POWER switch to "OFF" then "ON" again.
6. During the alarm condition, picture is displayed only for the time set by the ALARM TIME control. To monitor the scene after it, operate as follows.
   1) Set the monitor mode select switch to "CAMERA".
   2) Press the manual switching button of the camera from which the alarm mode is activated.
7. To resume the original mode:
   1) Press the AUTO button.
   2) Set the monitor mode select switch to "ST/BY".

To Monitor Video Recorder Playback

1. Set the POWER switch to "ON".
2. Set the monitor mode select switch to "VTR".
3. Play the recorder.

Note: • For operation of the video recorder, see the instructions provided with them.

SPECIFICATIONS

Horizontal resolution	: More than 900 lines (at center)
Scanning frequency	
Horizontal	: 15.75 kHz (U-type)/15.625 kHz (E-type)
Vertical	: 60 Hz (U-type)/50 Hz (E-type)
Inputs	
Camera	: x 6, TK-10/N10 only
VTR Playback	: 1 Vp-p (composite video signal), 75 ohms
Alarm	: x 6, contact low level (1 mA current flows in low level. 12 V is applied in high level.)
Timer	: Contact low level
Outputs	
Camera-1	: 1 Vp-p (composite video signal), 75 ohms
Alarm	: Make contact (metal), alarm time 8 sec to 20 min.
Timer	: Open-collector (low level)
Select	: x 6, open-collector (low level)
Video	: 1 Vp-p (composite video signal), 75 ohms

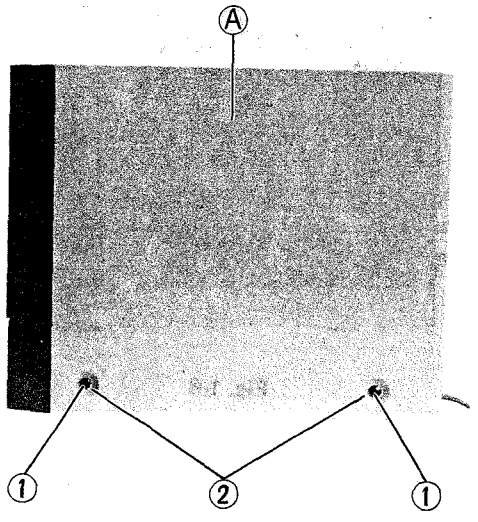
SECTION 1
DISASSEMBLY

1.1 REMOVING THE TOP COVER

1. Remove four screws (1) and four washers (2) , then remove the top cover (A) .



Fug. 1-1

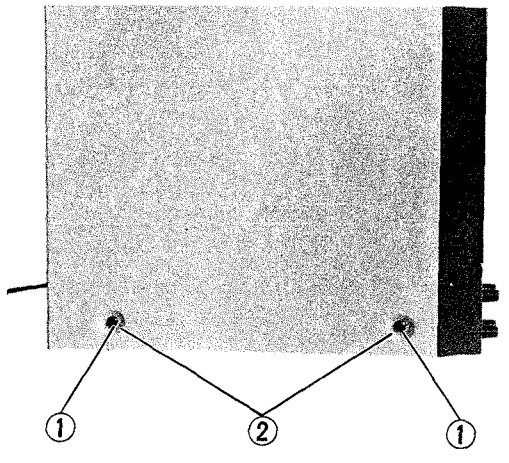


Fig. 1-2

1.2 FUSE REPLACEMENT

Before replacing a fuse, the reason why it blew should be investigated to prevent trouble from spreading. The malfunction should be repaired before replacing the fuse.

1. Before replacing the fuse (B) , set the Power switch OFF or disconnect the power cord from the AC outlet.

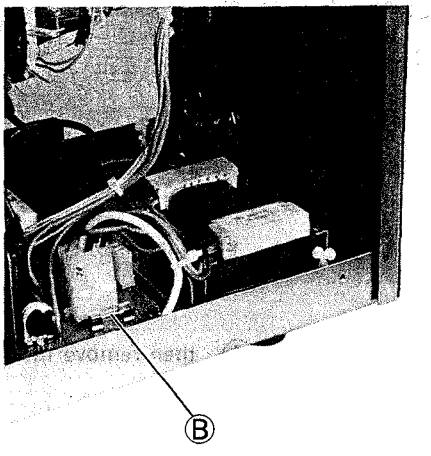

Fig. 1-3

2. For the protection of the camera and for your safety, replace with a fuse with the specified part number.

TM-9060 (U type) : QMF51J1-1R6; 1.6 A – 125 V
" (E type) : QMF51A2-R80; T800 mA – 250 V

" (E type) : QMF51A2-R63; T630 mA – 250 V

1.3 REMOVAL OF PRINCIPAL CIRCUIT BOARDS

1.3.1 Removing the MON board

1. Remove two screws ③ and bottom plate Ⓒ .

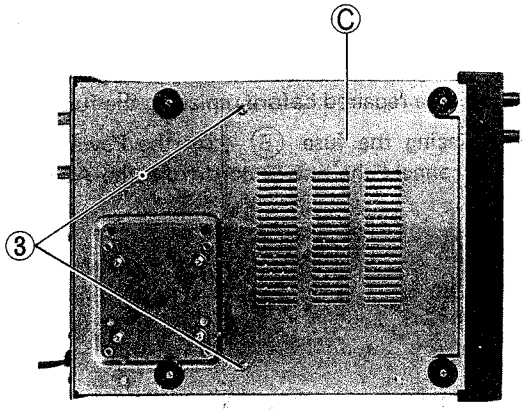

Fig. 1-4

2. Remove four screws ④ , then remove the MON board Ⓓ .

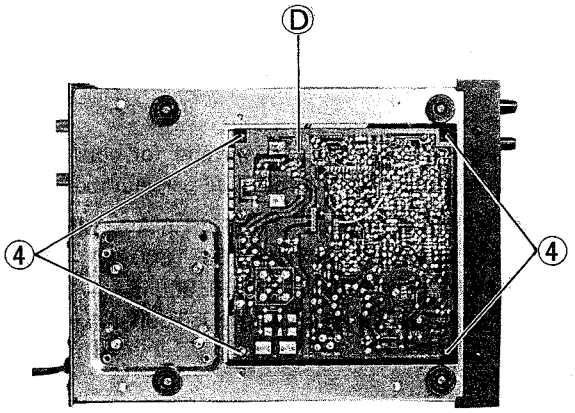

Fig. 1-5

1.3.2 Removing the ASB board (for TM-9060)/ Removing the CMD board (for TM-9010)

1. Remove the cover according to 1.1.
2. Remove four screws ⑤ , then remove the circuit board Ⓔ .

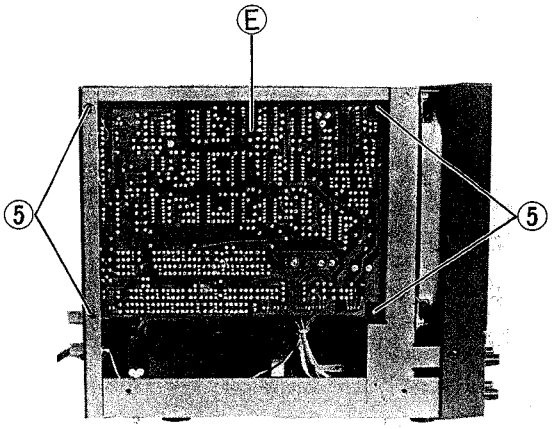

Fig. 1-6

1.3.3 Removeing the CBB board

1. Remove four screws (6) and four washers (7), then the rear panel (F), open as in Fig. 1-8.

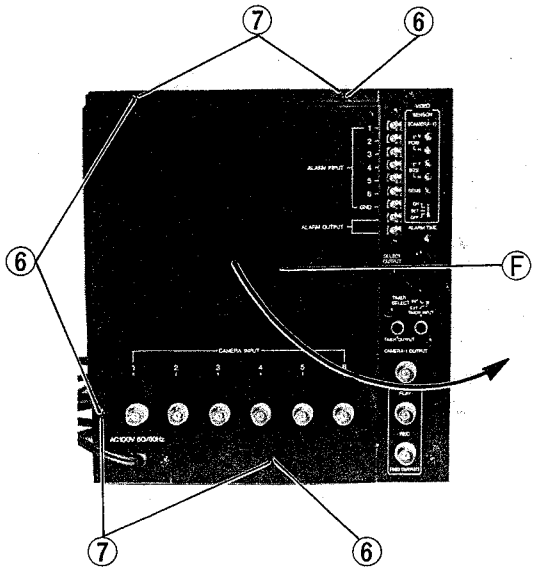

Fig. 1-7

2. Remove two screws (8), then remove the CBB board (G).

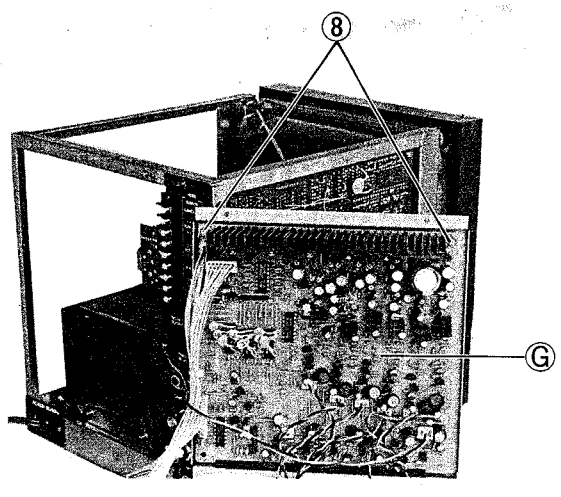

Fig. 1-8

1.4 REMOVING THE CRT

- Remove the top cover according to 1.1.

1. Remove four screws (9) and front panel (H).

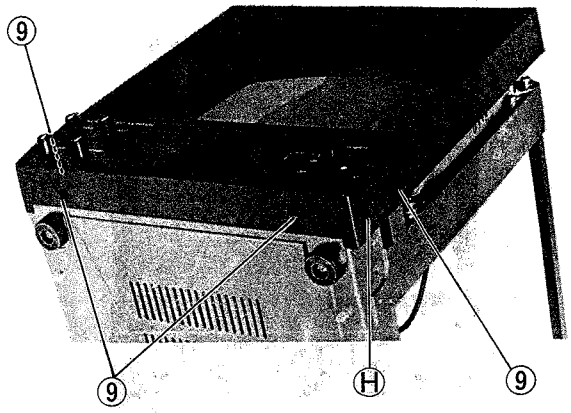

Fig. 1-9

2. Remove four screws (10) and front cover (I).

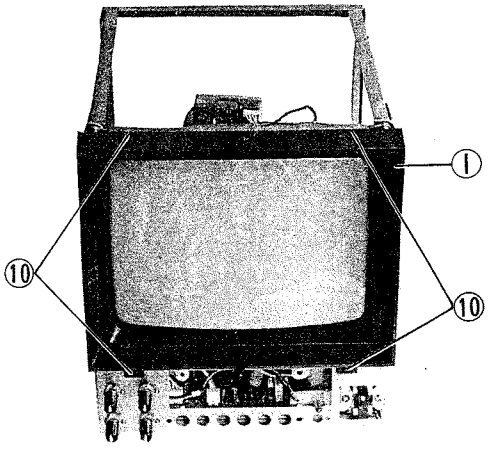

Fig. 1-10

3. Remove four screws (11) , then remove the CRT (J) .

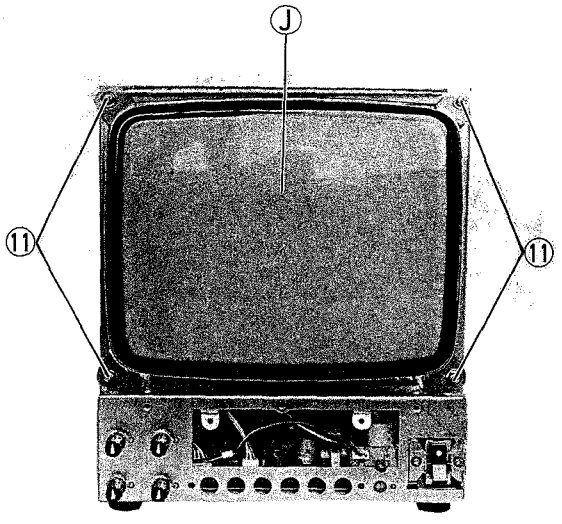

Fig. 1-11

1.5 REMOVING THE TRANSFORMER

1. Remove four screws (12) , then remove the transformer (K) .

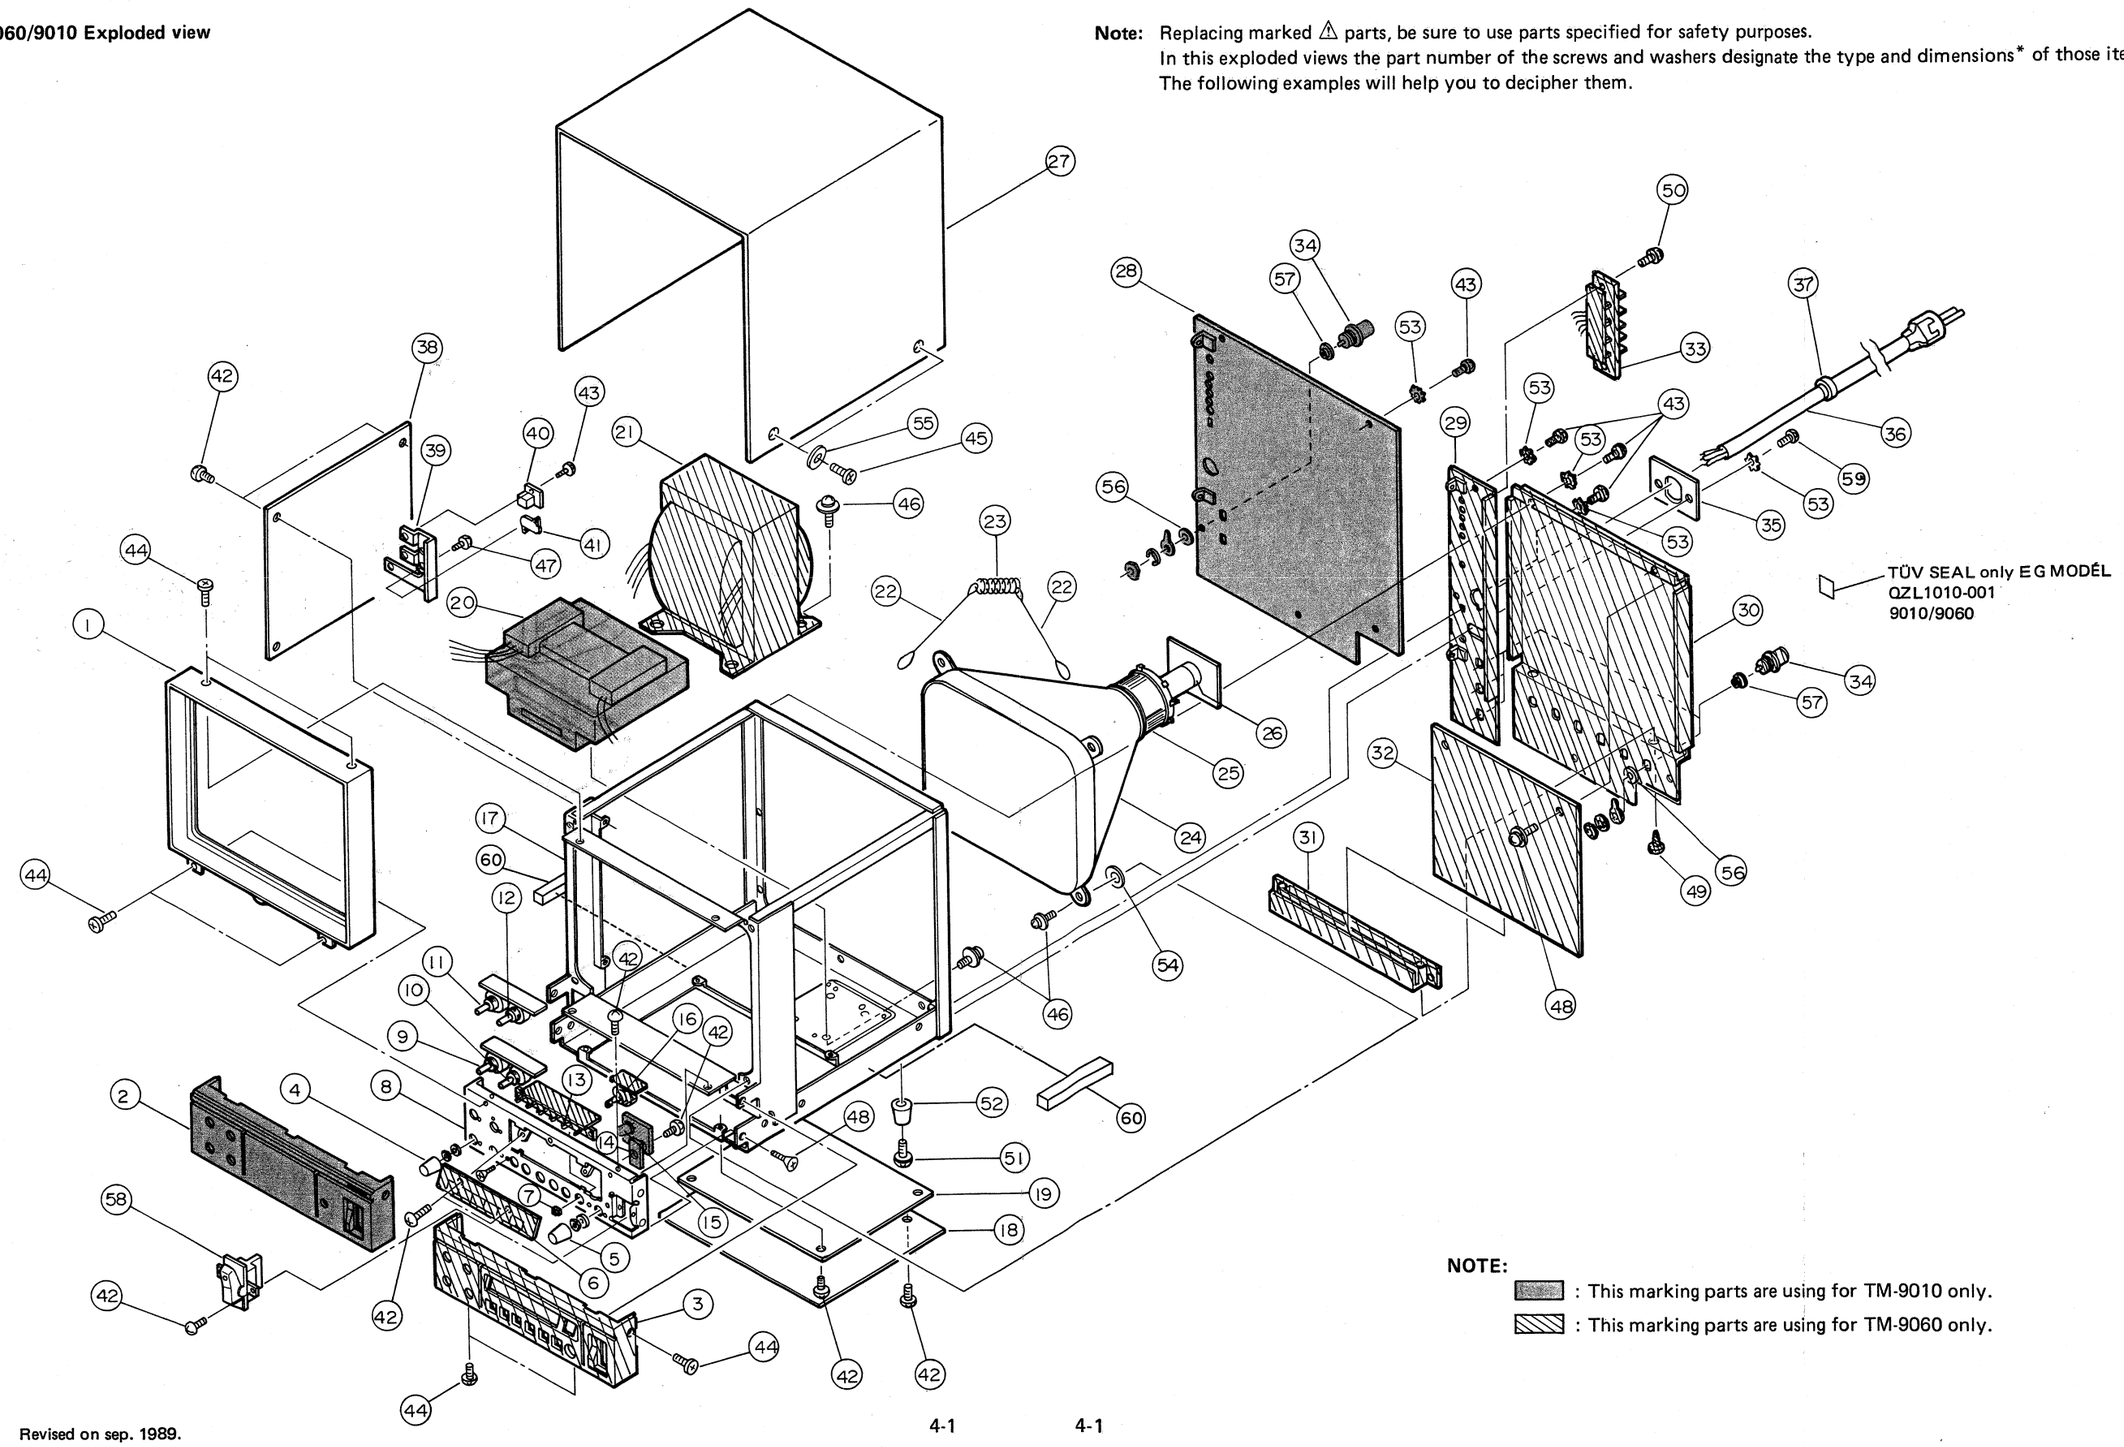
SECTION 4
EXPLODED VIEW AND PARTS LIST

- **TM-9060/9010 Exploded view**

Note: Replacing marked ⚠ parts, be sure to use parts specified for safety purposes.
In this exploded views the part number of the screws and washers designate the type and dimensions* of those items.
The following examples will help you to decipher them.



NOTE:
: This marking parts are using for TM-9010 only.
: This marking parts are using for TM-9060 only.

Revised on sep. 1989.

SECTION 2
ADJUSTMENT PROCEDURE

Notes: 1. TK-10/N10 video camera is necessary for TM-9060/9010 video monitor. However TM-9060 has "VIDEO INPUT" connector, so TM-9060 is possible adjustment by test signal (monoscope signal, crosshatch signal, etc.).

2. Picture adjustment potentiometers are located on the MON board.
   *When adjust the item 1., 2., 3., 4., remove the bottom cover. Possible to adjust from above when the bottom cover is removed. (refer to "1.3.1 Removing the MON board")
   *When adjust the item 4., 5., 6., 7., remove the top cover. (refer to "1.1 REMOVING THE TOP COVER")

1. Power supply adjustment:

Adjustment point	Adjustment VR	Adjust level
Between TP-15 and chassis	R82 12 V ADJ. (NOM board)	12 V ± 0.1 V

2. V-HOLD and H-HOLD adjustment:
   When the picture is distorted in the vertical or horizontal directions, correct these with the V-HOLD (R69) and H-HOLD (R70) potentiometers.

3. Vertical linearity adjustment:
   Apply the image signal from TK-10/N10 so that crosshatch or vertical symmetry can be confirmed. Adjust the V-LIN (R51) potentiometer until the picture distortion becomes minimum.

4. Vertical amplitude adjustment:
   Adjust the HEIGHT (R53) potentiometer togeter with the vertical linearity adjustment so that the picture covers the entire CRT screen.

5. Focus adjustment:

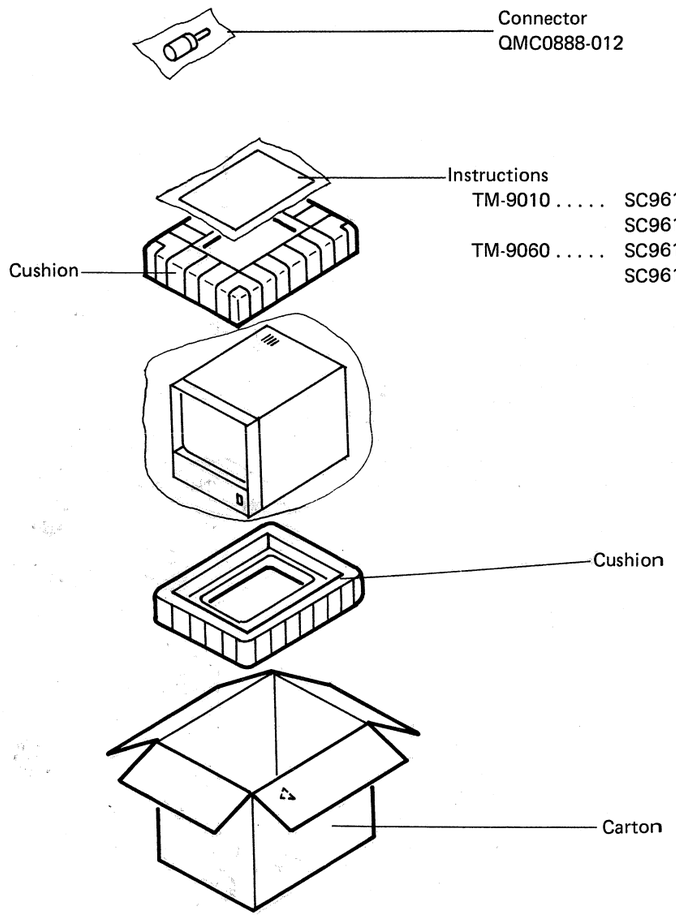
   WARNING! : Be careful not come into contact with the high-voltage focus control potentiometer while adjusting the focus.

   Shoots the object which has white and black details. Set the "BRIGHT" knob (on the front panel) to mechanical center position. Adjust the FOCUS (R68) potentiometer to become best focusing.

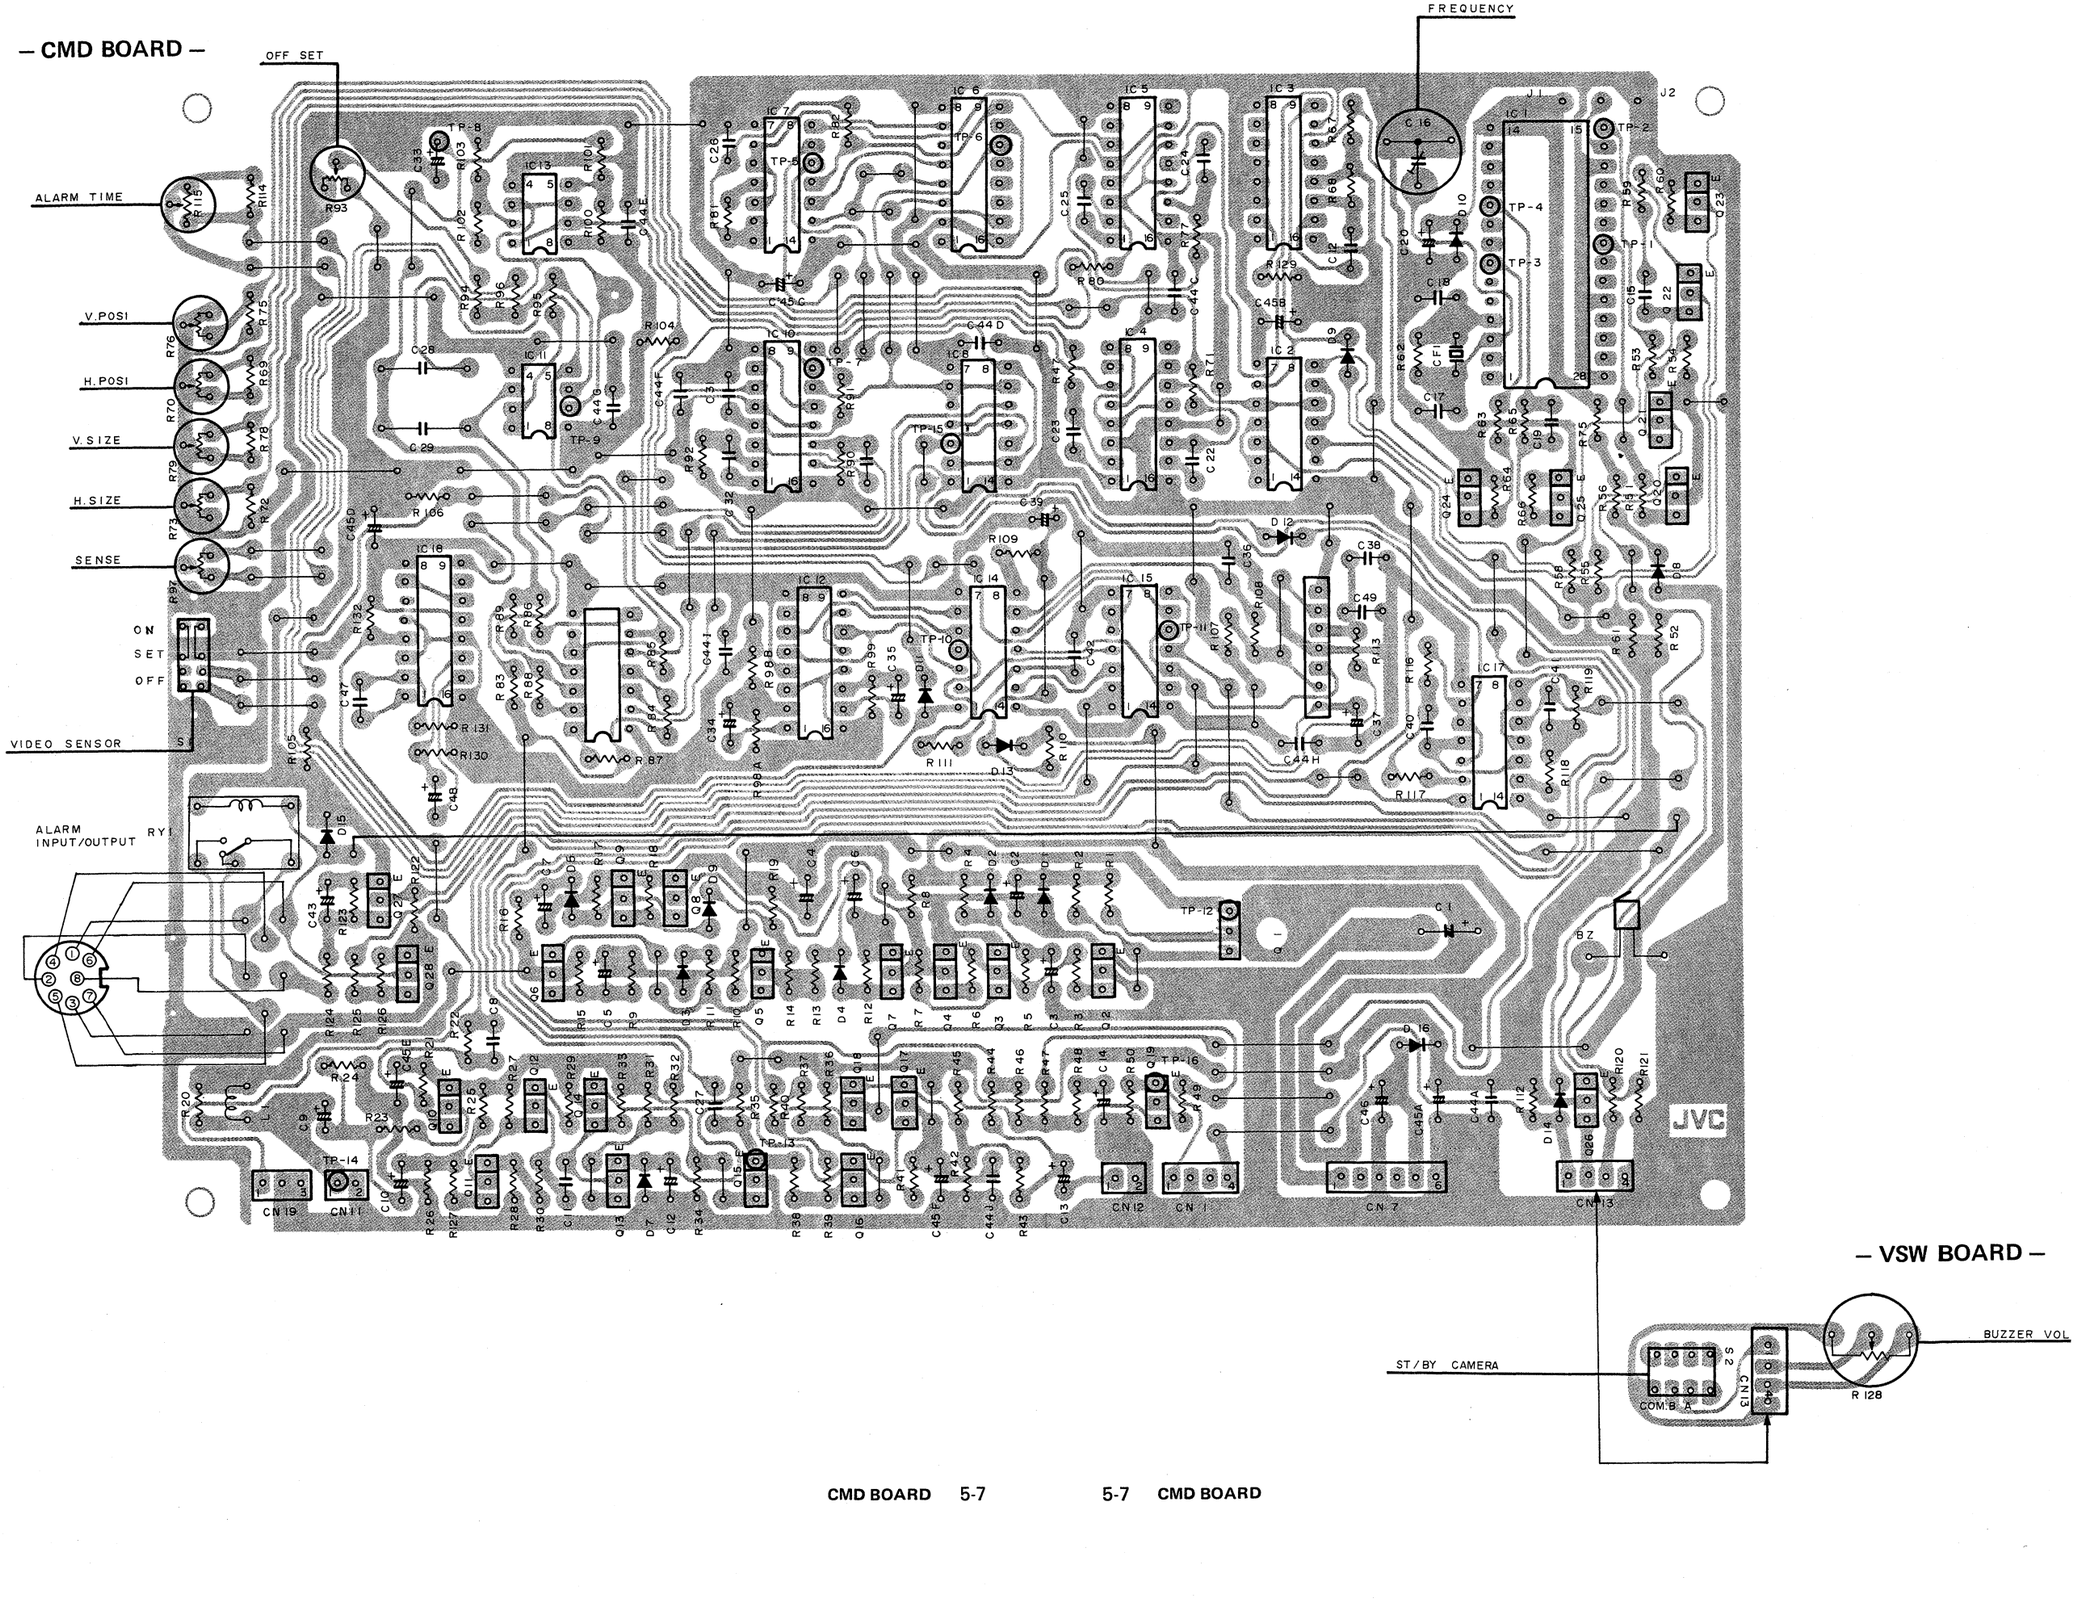
6. SUB-BRIGHTNESS Adjustment:
   Shoots the monochrome object (gray scale pattern etc.) by TK-10/N10. Set the "BRIGHT" and "CONTRAST" knobs (front panel) to mechanical center position. Adjust the "SUB-BRIGHTNESS" (R28) potentiometer so that black part of the gray scale is discriminated on the monitor.

7. DEF yoke adjustment:
   Usually, it is not necessary for DEF yoke replacement. If appear H/V blanking on the monitor, adjust the centering magnets on the yoke ass'y.

REPACKING
SECTION 3



5.9 CMD CIRCUIT BOARD (with VSW board) — TM-9010 only —



SECTION 6
ELECTRICAL PARTS LIST

1. **IMPORTANT SAFETY NOTICE**
   Parts identified by the ⚠ symbol are critical for safety. Replace with parts number specified. For maximum reliability and performance, all other replacement parts should be identical to those specified.

2. Abbreviations in this list are as follows:
   RESISTORS – All resistance values are in ohms (Ω).
   - K : 1 000
   - M : 1 000 000
   - CR : Carbon Resistor
   - Comp. R: Composition Resistor
   - WR : Wire Wound Resistor
   - OMR : Oxide Metal Film Resistor
   - VR : Variable Resistor (Potentiometer)
   - MFR : Metal Film Resistor

   CAPACITORS – All capacitance values are in μF, unless otherwise indicated.
   - P : μμF
   - C Cap : Ceramic Capacitor
   - E Cap : Electrolytic Capacitor
   - FM Cap : Film Mica Capacitor
   - MM Cap : Metalized Mylar Capacitor
   - MP Cap : Metalized Paper Capacitor
   - MY Cap : Mylar Capacitor
   - NP Cap : Non-polar Capacitor
   - PC Cap : Polycarbonate Capacitor
   - PP Cap : Poly Pro Capacitor
   - PS Cap : Polystyrol Capacitor
   - T Cap : Tantalum Capacitor
   - TR Cap : Trimmer Capacitor

   Tolerances of resistors or capacitors are as follows:
   - M : ± 20 %
   - K : ± 10 %
   - J : ± 5 %
   - G : ± 2 %
   - F : ± 1 %
